DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 6 and 12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 6 is vague since it is unclear how the resistor can alternatively be connected to the strain gauge or a previously unclaimed temperature compensated transducer since the resistor has been already connected to the strain gauge in claim 1. It is unclear how the recited means of claim 12 relates to any of the previous recited elements of the instrument since it lacks any relationship to the strain gauge.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bell et al (WO 9639086) in view of Leboutitz et al (6,494,882) and Burek (6,361,532). Bell et al discloses the basic instrument as detailed at page 10, lines 2-22 and page 12, lines 14-19. The reference discloses the strain gauge on the active electrode but fails to disclose detailed structure of housing, blade, and switch. Such structure is conventional in the art as disclosed by Leboutitz et

al and Burek. Leboutitz et al (see column 5, line 11 – column 6, line 53) discloses the basic housing, blade, and strain gauge structure while Burek discloses the activation switch. Therefore, it would have been obvious to the skilled artisan to employ the conventional structure in Bell et al since a predictable result would ensue.

Allowable Subject Matter

Claims 1-5, 7-11, and 13-18 are allowed.

Claims 6 and 12 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
